

ESKID™

FASTER INSTALLS. LOWER COSTS. FUTURE-READY DESIGN.

Excellerate Products™ eSkid™ is an above-ground, configurable EV charging infrastructure product built for speed and scalability, giving you the confidence to expand as demand grows. With its drop-in, plug-and-play design, eSkid makes DC fast charging deployment faster, easier and more cost-effective for commercial and fleet applications. Accelerate timelines, lower project costs and scale with confidence.

LOWER PROJECT INSTALL COSTS:

eSkid™ cuts total labor by 30% and overall project material costs by 82%.*

A FUTURE-PROOFED NETWORK:

Swap chargers at the same power level or add additional chargers without costly infrastructure changes.**

CONSISTENCY ACROSS SITES:

The ONLY above-ground EV charging infrastructure product designed for true standardization allowing for easier implementation and servicing.

CERTIFICATIONS & COMPLIANCE

NEMA 3R, ADA, NEC, Build America, 140 MPH and Seismic D rated.

PRODUCT FEATURES

CHARGER TYPES & BRANDS

Charger Agnostic
Must be DCFC and monolithic

NUMBER OF CHARGERS

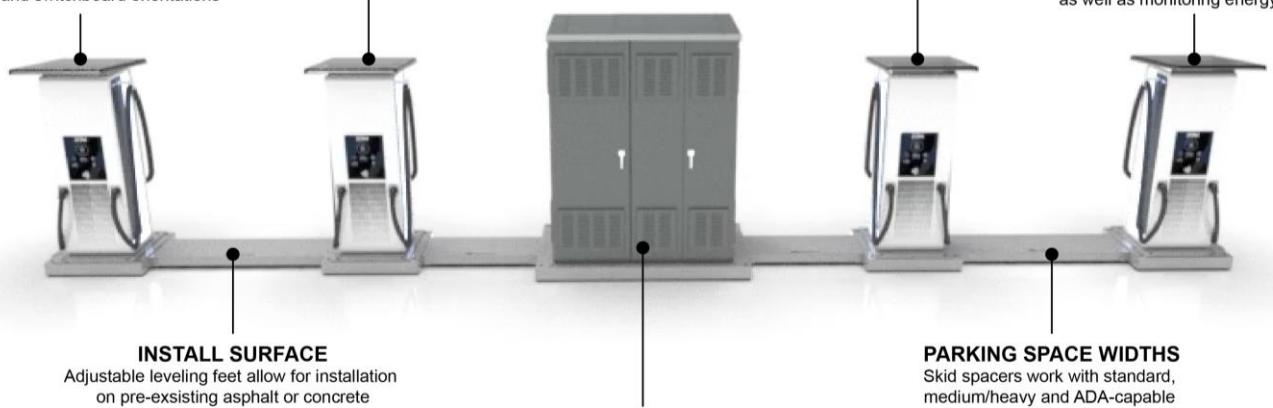

Allows up to eight chargers on one eSkid

LAYOUT & ORIENTATION

Can accommodate different layouts, charger and switchboard orientations

PAYMENT & CMS

Software options capable of taking payment via cell, credit or EC card, as well as monitoring energy usage

*On average compared to traditional EV infrastructure installs. Averages are based on comparisons of eSkid™ installs to traditional EV project installs. Costs may vary depending on labor costs and distance to switchboard (traditional install).

** Utility and transformer specifications need to be reviewed and approved for future expansion plans to ensure expandability.

FULL PRODUCT LIFECYCLE SUPPORT

Product Warranty: All products include a standard 1-year warranty covering system components and workmanship, with extended options available.

Service Level Agreements: Our SLAs provide worry-free management of all annual and semi-annual maintenance tasks to reduce unplanned downtime and extend product life.

- **Preventive Maintenance:** Routine inspections and servicing to ensure safe, clean and reliable operation through scheduled maintenance of eSkid™ framework, wireways, structures, AC distribution and grounding systems. Includes OEM-specific maintenance tasks for approved chargers, including firmware checks and charging session validation.
- **Reactive Maintenance:** Fast deployment of field service technicians for on-site diagnostics and component replacement when failures or faults occur.
- **Remote Monitoring:** Real-time monitoring, critical fault detection and alarm triage with optional 24/7 NOC integration available, enabling remote resets and proactive dispatch if needed.

Training Options: We offer a variety of blended training for operators and maintainers alike to support safe operation and increased uptime.

Spare Parts & Kits: Product-specific spare part kits and/or individual part replacements are available for purchase via our comprehensive parts catalogue.

Mid-Life Reset Programs: Product refurbishment, component upgrades and system recalibration services available to delay full replacement costs.
